## LINEAR 2400

In addition to the wearable transmitter, the Personal Emergency Reporting System Console is designed for wall mount, tabletop or bedside placement. It features a large EMERGENCY button giving two options for help.

The Linear 2400 connects to your landline phone service. The Console receives your signal and immediately and automatically places a call to the Emergency Monitoring Center.

A trained professional at the Emergency Monitoring Center talks directly to you to assess the help you need, and will stay on the line until assistance arrives. He or she will call your designated contact.

## SENTRYPAL

The SentryPal is powered with **cellular and GPS technology** allowing you to go anywhere you like and be confident that if you need it, help is just a touch of a button away. Seniors may not have their cell phone when an emergency happens. The SentryPal's single button operation is the simplest way to call for help anywhere.

## MONITORED 24 HOURS

Your Personal Emergency Reporting System connects to your home telephone line. With the push of a button, it automatically places a call to trained professionals for help whenever you need assistance.
